Hi,

Is the Association concerned about 5G coming to Mapua? There are currently concerns regarding the health effects created by 5G. My point of bringing up my concern was to alert the committee - is this something the committee is aware of - ie effects of 5G? Is this something that the association would look at?? Or at least be on their radar?? Mapua as a community should be able to voice their concerns.

Hi All,

I am concerned with 5G technology coming to Mapua, as one of the cell phone base stations is extremely close to Mapua school.

There are already places around the world banning the deployment of 5G technology (Mill Valley, CA, - north of San Francisco, and some parts of Europe too)

The main advantage of 5G technology is latency, which most applications will not require this enhancement. The other advantage is of course speed, but with a correctly designed 4G network most applications will not be effected by staying at the 4G technology.

There is already a "Nelson - say 'NO' to 5G" campaign, hopefully Mapua will follow. For more details please see: www.5G.org.nz

Regards,

Concerned resident
